

As ERP order management and carrier systems become more complex and dynamic, Middleware integration technology provides the necessary shipping services that connect these systems together with no changes, drastically reducing downtime and the cost of support and maintenance.

Key Benefits

Shipping Department - Entry of shipping information is eliminated using the carriers software. Assures compliance and data accuracy and productivity.

Billing Department - By posting back all the shipping charges and tracking information back to the order, the billing department saves a lot of time and data accuracy not entering shipping data. Invoices can be created immediately.

Customer Service - Sending e-mail notifications and showing tracking information on invoices, minimizes the need for customer's inquiries on the shipping status. The Inquiry tools keep the customer service staff productive, and provides greater customer satisfaction.

Management - Shipping history reports provides the key information to manage and monitor shipping charges to the customer.

The customer - Subscription software provides complete installation, technical support and upgrades for a single monthly fee.

Integrations

Carrier Systems
